

STOP THE STAINING

WITH BETTER WATER

Keep your clothes vibrant and fixtures clean all day, every day. Iron can be a troublesome issue when it comes to your water. It oxidizes on everything your water touches, leaving rust stains and chunks through out your home.

The AquaBella Eliminator III by Capital Water is a reliable way to reduce the iron content as soon as water enters your home. This way every room is protected from the embarrassing rust build up and stains.

With powerful performance and reliable efficiency, AquaBella is the low maintenance way to tackle iron issues — no filter changes necessary!

AquaBella

PROTECT

Prevent rust deposits from building up in your plumbing and appliances

SAVE

Clothing and linens stay brighter longer and need less replacing

ENJOY

Shower heads and faucets stay open for better water flow

CLEANER LIVING EVERY DAY

WITH AN AQUABELLA IRON FILTER

VALUE YOU CAN SEE THROUGH YOUR ENTIRE HOME

IN THE KITCHEN

- Porcelain sinks and dishes stay white.
- Eliminates rust clogging dishwasher and faucets.
- Reduces metallic taste in water for better food and beverages.

IN THE BATHROOM

- No more rust-ring stains in the toilet.
- Bathtubs, showers, and sinks stay cleaner longer.
- Reduces clogging of shower head nozzles for maximum water flow.

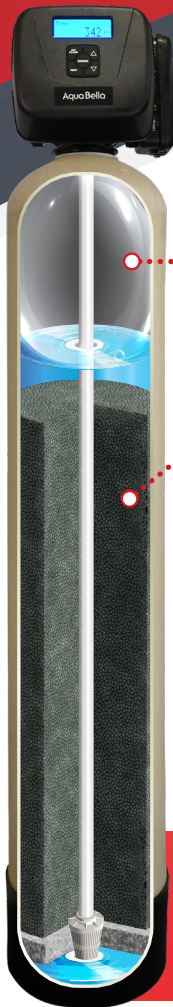

IN THE LAUNDRY

- Clothes stay bright and vibrant with less staining.
- Washing machines are protected from rust buildup.

THROUGHOUT HOME

- Water heaters run more efficiently.
- Pipes remain open without rust deposits.

HOW DOES IT WORK? THE FILTRATION PROCESS

- 1** Water passes through a specialized pocket of air, forcing iron dissolved in the water to oxidize which changes it to a particle.
- 2** These particles flow down into a specialized filtration media that accelerates the oxidization process and captures the iron particle.
- 3** Once the media has collected all the iron it can hold, the filter automatically starts a "regeneration" process.
- 4** During regeneration, the air pocket is released so the tank can perform a series of wash and rinse cycles to knock the iron off the media.
- 5** Once the media is refreshed, the filter pulls air back into the tank while adding ozone, a chemical-free way to prevent bacteria growth.

AQUABELLA'S ADVANCED TECHNOLOGY

- Predictive regeneration based on water usage habits.
- Cycles designed for maximum efficiency.
- No extra battery necessary to retain memory.
